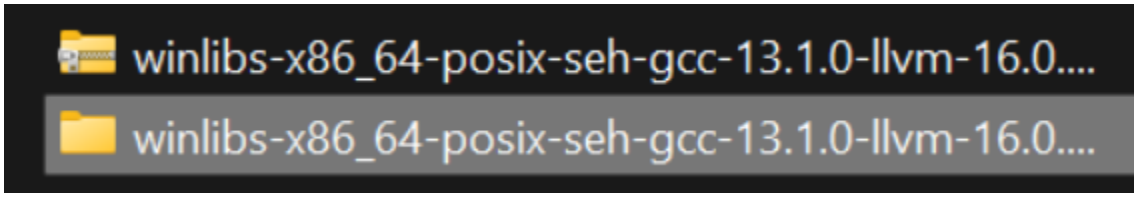
Software Installation Instructions

MinGW Installation

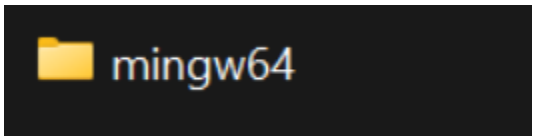
Step-1:
First, check if your system is 32 or 64 bit.
Go to, Settings -> System -> About and
Look for,
System Type - 64-bit operating system, x64-based processor

Step-2:
Download MinGW according to your system architecture, you found in the Step-1.
Find 64-bit MinGW here
Find 32-bit MinGW here

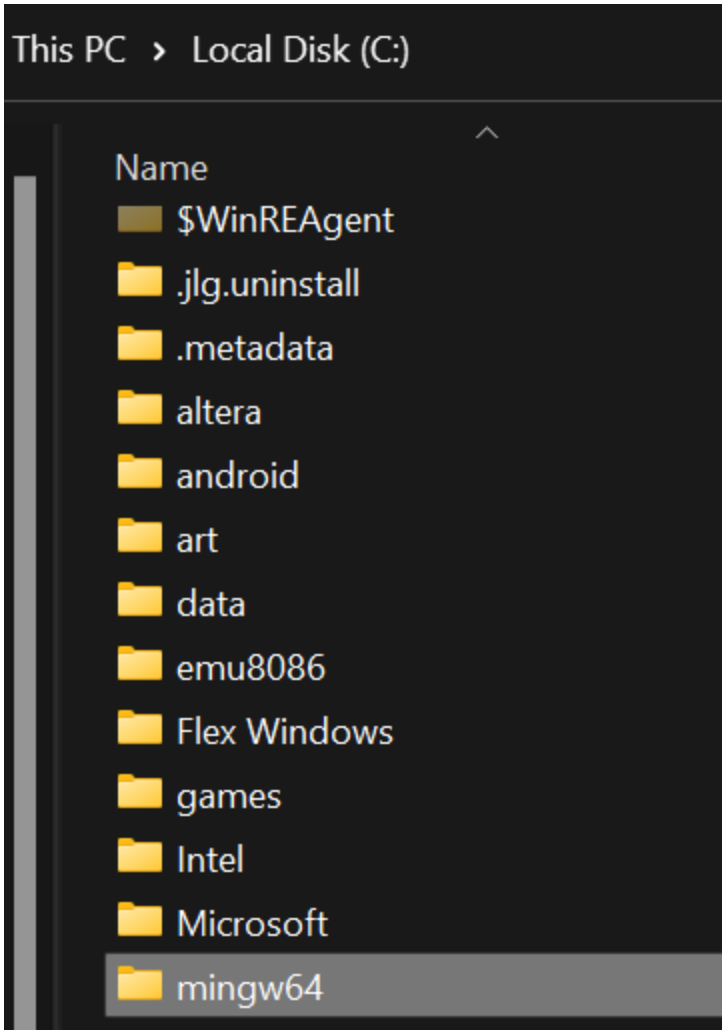
Step-3: After downloading the zip file, extract it.



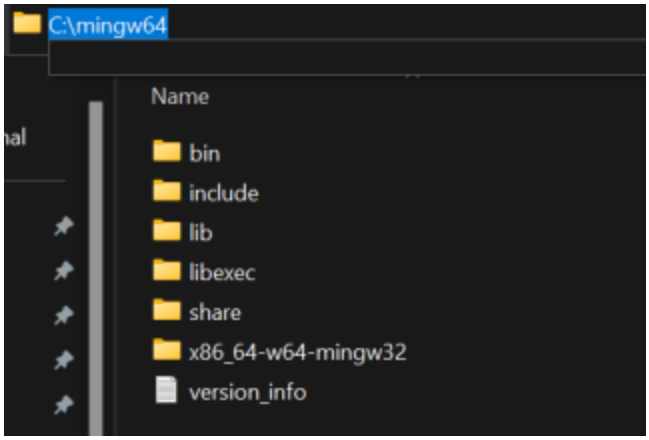
Step-4:
Double click on to that extracted file,
You will see a folder inside it called mingw64.



Step-5:
Copy that folder and paste it into your C drive.



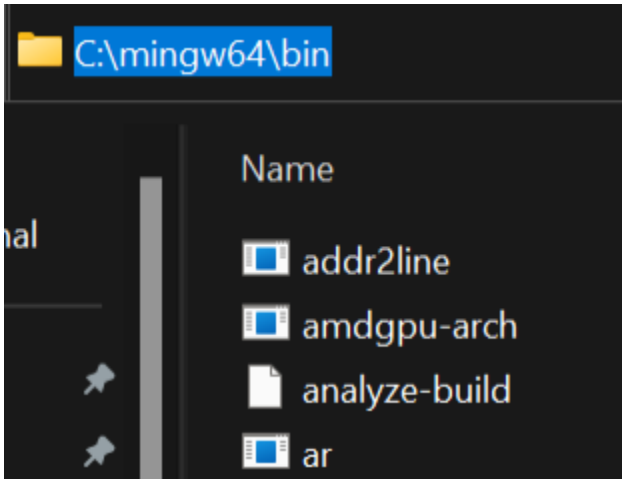
Step-6:
Double click on the mingw64 folder you just copied into the C drive and Copy the location as you can see in the picture above and store in a notepad.
C:\mingw64 (in my case)



Step-7:

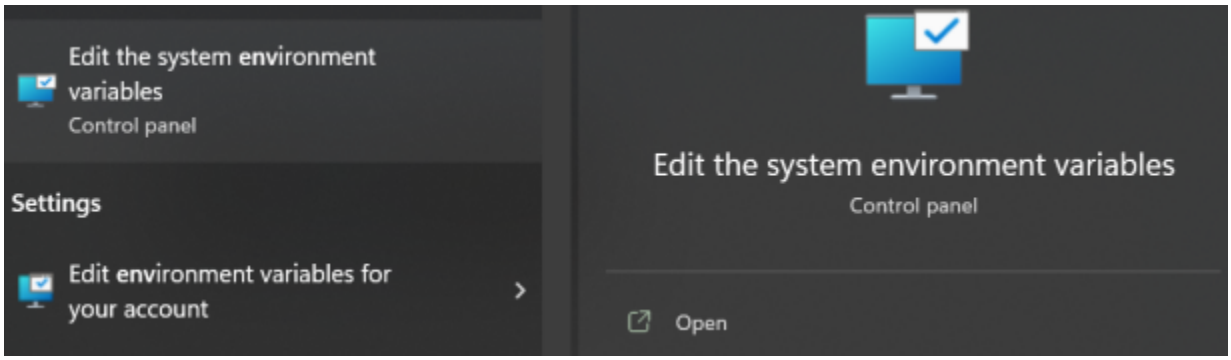
Double click on the bin folder inside mingw64. Copy the location as you can see in the picture above and store it in a notepad.

C:\mingw64\bin (in my case)

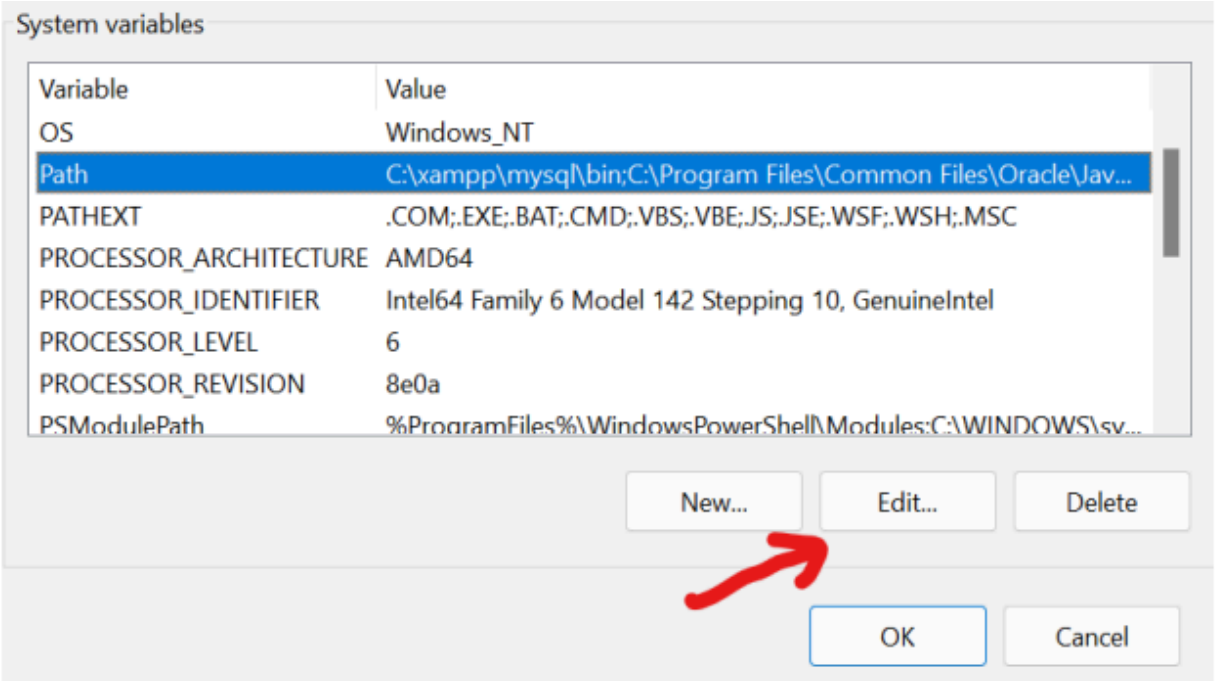


Step-8:

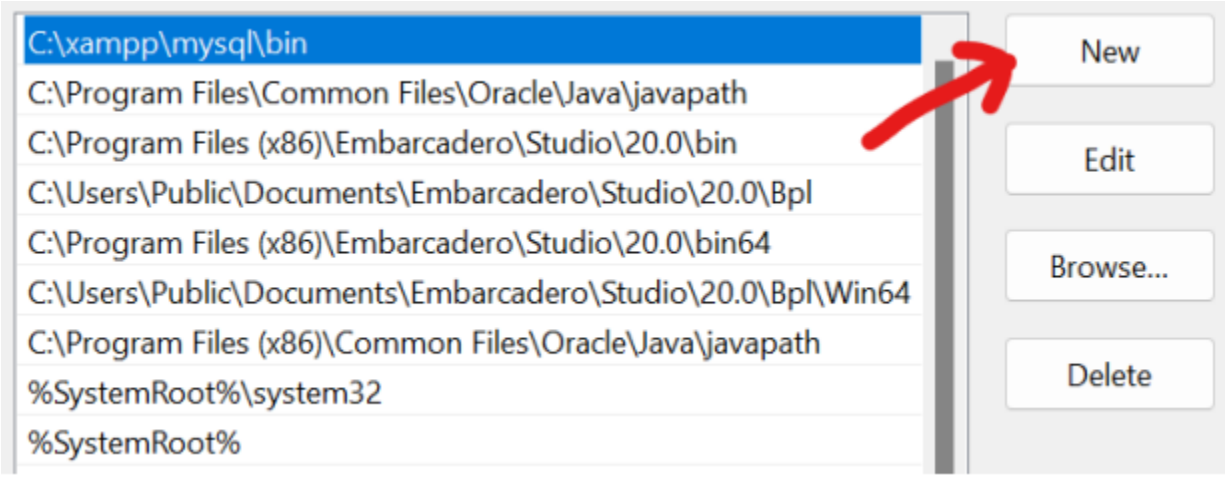
Now, we will update the path variables. Go to windows-search and type env



Go to “Edit the system environment variables”. We will edit the system variables,



Select the Path variable and click Edit, It will open up a new window then press New



paste the location you saved in Step-6 (C:\mingw64)
Then again press New and paste the location you saved in Step-7 (C:\mingw64\bin)
Finally, press Ok and save. After setting the path variables, restart your computer. (you MUST do it)

Step-9:
Now open your command prompt and Type G++ --version. You should see something like the picture below.

```
C:\Users\parth>G++ --version
G++ (MinGW-W64 x86_64-ucrt-posix-seh, built by Brecht Sanders) 13.1.0

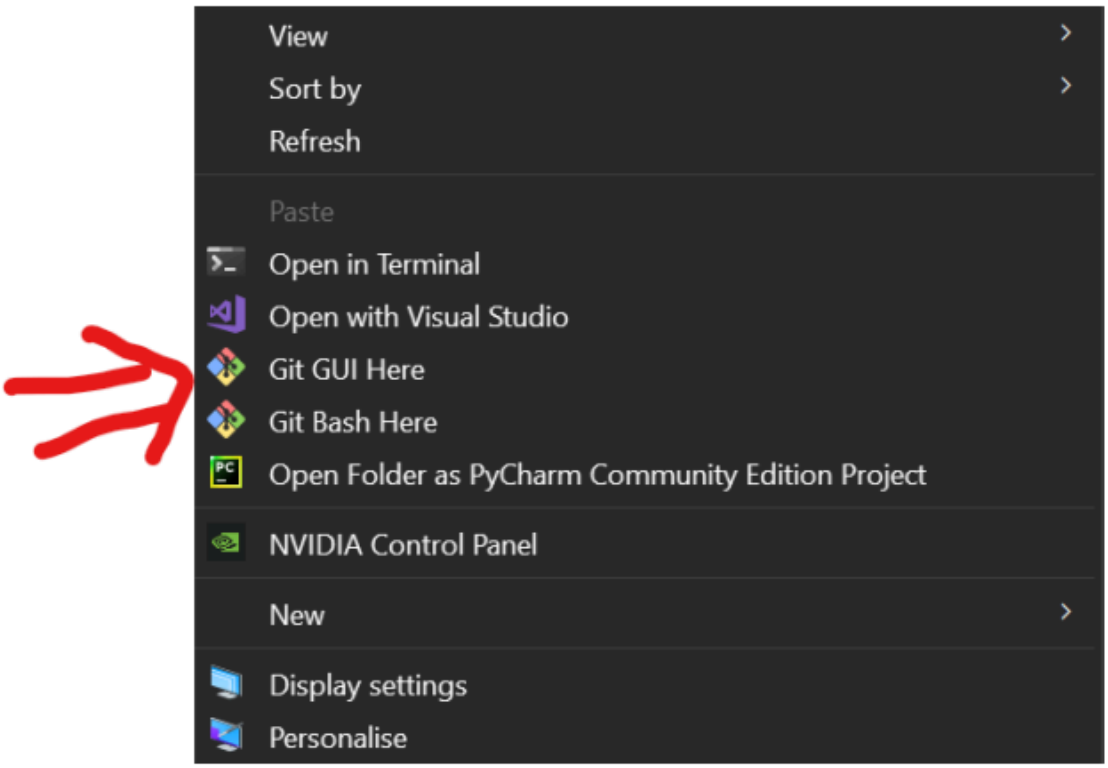
Git Bash Installation

Step-1: Download Git Bash from here

Step-2: Simply double click the .exe file you downloaded and it will be installed.

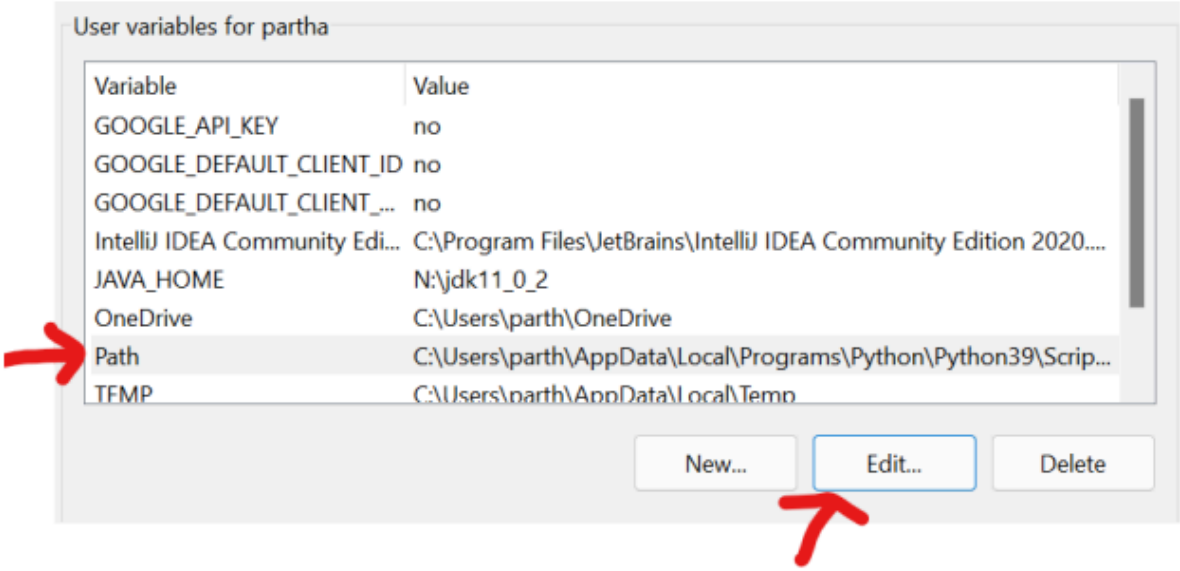
Verify: To verify if git bash is installed, go to any folder and right click on your mouse,

And you should Git Bash and Git GUI in the options.

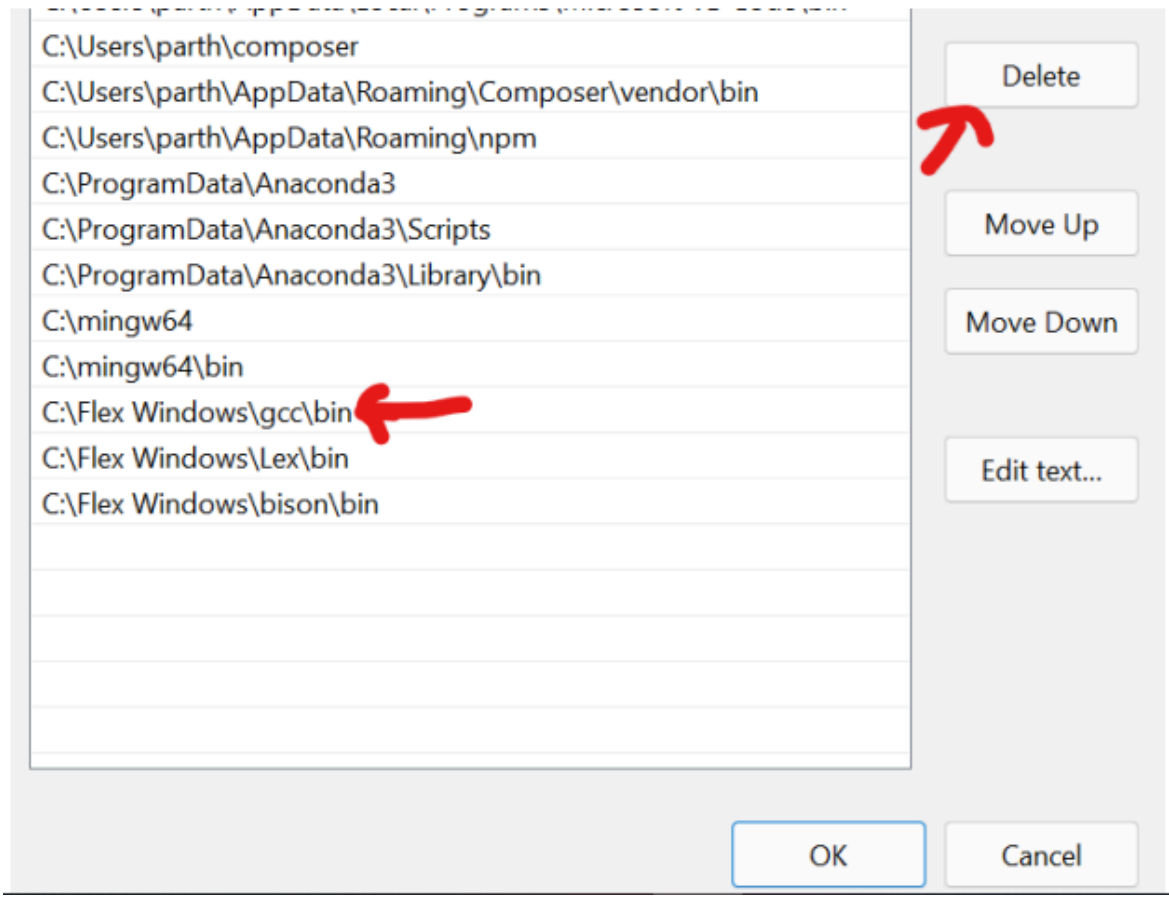


FLEX Installation

Step-1: Download Flex from here
Step-2: Simply double click the .exe file you downloaded and it will be installed.
Step-3: Now go to the path variable, this time we will check the user variables, (refer to Step-8 of MinGW installation in case you forgot how go to path variables)
Select Path and click Edit,



Then select ……\gcc\bin and click Delete then press Ok



You **must** maintain the path variable sequence and make sure that you do not ha
Any other G++/ GCC/MinGW set before these four in your path variable.

C:\mingw64
C:\mingw64\bin
C:\Flex Windows\Lex\bin
C:\Flex Windows\bison\bin

Now, restart your Computer and try to run the given files.
